					<input type="checkbox"/>
					<input type="checkbox"/>

IMPORTANT: Provide all supporting documentation that this water body is important for the spawning, rearing or migration of anadromous fish, including: number of fish and life stages observed; sampling methods, sampling duration and area sampled; copies of field notes; etc. Attach a copy of a map showing location of mouth and observed upper extent of each species, as well as other information such as: specific stream reaches observed as spawning or rearing habitat; locations, types, and heights of any barriers; etc.

Comments: Location; Township 28S Range 34E Section NE 1/4 1 ; Latitude N59 degrees 31.181, Longitude W139 degrees 33.715 (NAD27). Stream is number 1 on the map.

Stream characteristics: Width .6 - .9 m; depth .3 - .8 m; muskeg/wetlands with clay and organic soils, grass/sedge and some willow. Affected by Colorado Road interception.

Stream surveys were part of the Yakutat Fish Habitat and ATV Trail Assessment project. Field crews surveyed streams for fish using baited minnow traps. Soak times for traps were usually less than 30 minutes per trap/ two traps per sample site. Captured fish were identified and released on-site. Field teams were comprised of ADF&G and Yakutat Ranger District personnel.

Name of Observer (please print): Phil Mooney
Signature: ALASKA DEPT. OF FISH AND GAME
Address: 304 LAKE ST. ROOM 103
SITKA, AK 99835-7563

Date: 6/30/2001

This certifies that in my best professional judgment and belief the above information is evidence that this waterbody should be included in or deleted from the Catalog of Waters Important for Spawning, Rearing or Migration of Anadromous Fishes per AS 16.05.870.

Signature of Area Biologist: Phil Mooney

Revision 3/97

Add Stream 182-80-10100-2087
